

composer 1 memory limit

issue

composer will run into memory limit due to memory leak when checking lot of package.

solution:

temporary usage unlimited memory

```
php -d memory_limit=-1 /usr/local/bin/composer require prettus/l5-repository
```

```
/usr/bin/composer
```

```
php -d memory_limit=-1 /usr/bin/composer update
```

update to composer 2

need to check if current package support composer 2 or not.
